

Sustainability Development Policy

Siamgas and Petrochemicals Public Company Limited and its subsidiaries (the “Company”) place great importance on enhancing operational performance by integrating innovation and new technologies into business processes to deliver high-quality, safe, and environmentally friendly energy products. The Company also emphasizes efficient energy management to meet growing consumer demands for energy products that align with current trends prioritizing social development and environmental impact reduction.

At the same time, the Company has established sustainability plans and is preparing for the development and expansion of its energy business toward clean energy solutions. These efforts aim to reduce greenhouse gas emissions and mitigate environmental impacts associated with climate change and global warming. The Company is committed to operating with a balanced approach that takes into account responsibility in three key areas: Environment, Social, and Governance (ESG). It has also set clear sustainability goals with the aim of becoming a global leader in the energy sector, while advancing environmental protection and fostering long-term community and social development.

Sustainability Strategy

Siamgas and Petrochemicals Public Company Limited and its affiliates are committed to operating an efficient energy business and providing comprehensive energy transportation services across all regions. The Company emphasizes effective energy product management based on three key pillars: Facilities, Safety, and Global Standards, throughout all operational stages—from transporting LPG from energy sources, LPG filling, distribution, to end-user consumption.

This strategy is aimed at delivering customer satisfaction and confidence in the Company's products, while minimizing both direct and indirect impacts and risks to the Company, its employees, consumers, communities, society, and the environment. In addition, the Company ensures fair pricing of energy products in accordance with government regulations.

The Company also places importance on developing employee capabilities and enhancing operational efficiency, with a strong focus on safety and risk reduction. Moreover, it is committed to conducting business under the principles of good corporate governance and zero tolerance for

corruption, ensuring transparency and accountability, which in turn supports the Company's vision of becoming a global energy leader.

Sustainability Goals

The Company recognizes that it is currently facing a range of business challenges—both internal and external—stemming from factors such as climate change, economic volatility, and rapidly changing societal behaviors in the “New Normal” era. These factors impact the Company directly and indirectly, requiring it to adapt and evolve its business model to remain resilient and achieve sustainable growth in the long term.

The Company is committed to building long-term resilience through strategic policies that drive operational development with a focus on product and service quality and safety. This spans across the entire value chain—from procurement, gas storage, LPG filling, transportation, to after-sales service—for household (cooking), industrial, and automotive LPG users, ensuring reliability in both quality and safety.

At the same time, the Company prioritizes the development of green energy solutions to balance its energy business portfolio and integrate sustainability into its core operations—paving the way for stable and sustainable business growth in the future.
